Subject: RE: Question regarding Kailua WWTP

Aloha Mike;

The requirement for "flow notification" is triggered when the 30-day average dry weather flows equals or exceeds 75% of the actual treatment capacity. See Section H, paragraph 2 of the 2006 permit.

Paragraph 3 requires implementation of contingency plans when the flow rate first equals or exceeds 85% of the actual treatment capacity. No restriction to "dry weather" mentioned.

I always thought that *both* of these paragraphs dealt with the 30-day average dry weather flows only and that wet weather flows did not trigger action under these paragraphs. I thought that high wet weather flows were grounds for reducing I/I in the collection system.

I could be wrong.

Sincerely,
Libby Stoddard

Subject: Question regarding Kailua WWTP

Hey Matt,

Do you know if a contingency plan for Kailua WWTP was ever submitted regarding the fact that the 30-day average discharge flow rate periodically exceeds 85% of their design capacity?

Kris didn't seem to know of a contingency plan being submitted, and we didn't see anything in the file during our copying. I'm wondering if they submitted something to you, or if you know that they've been granted an exemption?

Thank you,

Dan Connally
